

REDOX Signaling- Essential to Health

Breakthrough | bräk•thrü | - A major achievement or success that permits further progress, as in technology.

ASEA is a scientific breakthrough that addresses human health from the body's own angle:
-Redox Signaling Molecules-
Boosting the body's ability to repair itself.

ASEA offers an advantage that no other supplement can. *It's not just cutting edge. It's a whole new edge.*

Treadmill-tested, athlete-approved. Dr. David Nieman at the renowned Human Performance Lab at ASU has shown that athletes who drank ASEA experienced a huge mobilization the main source of fuel for the body. Indeed, even before exercise, these fatty acids are mobilized and ready to use as fuel for the muscles- Significant Power!

Protect. Repair. Replace. The health of our cells determines the health of our bodies. Our cells are designed first to protect themselves, second to repair any damage that does occur, and finally to replace a cell that experiences irreparable damage. The cell's ability to do this depends on how quickly and efficiently it can communicate, both inside and outside the cell. ASEA significantly increases the efficiency of communication signals between cells, those involved in cell damage detection, cell repair, and cell replacement.
